

a transmitting unit for transmitting the control signal to the electric apparatus;

a receiver for receiving additional information that has been extracted from the received information and transmitted by the electric apparatus;

an output unit for outputting the additional information received by the receiver to a display device;

a memory for storing at least a portion of said additional information; and

an erasing unit for deleting said information stored in said memory;

wherein said electric apparatus includes an extraction unit and an electric apparatus transmitting unit, said electric apparatus transmitting unit for transmitting the additional information extracted by said extraction unit to said receiver.

34. (New) The device of claim 33, wherein the additional information is an EPG that is included in the information received by the electric apparatus.

35. (New) The device of claim 33, wherein the additional information is advertisement information that is included in the information received by the electric apparatus.

36. (New) The device of claim 35 wherein the advertisement information includes coupon information.

37. (New) The device of claim 35 wherein the advertisement information includes URL information.

38. (New) The device of claim 33, further comprising:

a selecting unit for selecting information from the additional information received by the receiver, wherein said memory is configured to store the information selected by the selection unit.

39. (New) The device of claim 33, further comprising:  
a second storing unit for storing the additional information received by the receiver;

a second selecting unit for selecting information from the additional information stored in the second storing unit; and

a second transmitting unit for transmitting the information selected by the second selecting unit to a second electric apparatus.

40. (New) The device of claim 39 wherein the second electric apparatus is a recording apparatus, and wherein the recording apparatus performs a recording reservation based on the information transmitted from the control device.

41. (New) The device of claim 39 wherein the second electric apparatus is a personal computer, and wherein the personal computer accesses a server based on the information transmitted from the control device.

42. (New) The device of claim 33 further comprising a notifying unit for notifying a user of reception of the additional information when the receiver automatically receives the additional information.

43. (New) The device of claim 33 wherein the control device instructs the electric apparatus to transmit the additional information.

46. (New) The device of claim 33 wherein the output means outputs that part of the additional information which relates to information that will be received by the electric apparatus from a present time onward.

47. (New) A transmission medium for transmitting a computer program that is used in a control device which controls, by transmitting a control signal, an electric apparatus that receives information transmitted via a transmission medium, the computer program comprising the steps of:

- transmitting the control signal to the electric apparatus;
- receiving additional information that has been extracted from the received information and transmitted by the electric apparatus; and
- outputting the additional information received in the receiving step to a display device;
- storing at least a portion of said additional information; and
- selectively deleting said information stored in said memory;

wherein said computer program further includes the steps of extracting said additional information and transmitting the additional information extracted at said extracting step for reception at said receiving step.

48. (New) A control method, comprising the steps of:  
storing a computer program transmitted from the transmission medium, configured for transmitting said computer program that is used in a control device which controls, by transmitting a control signal, an electric apparatus that receives information transmitted via a transmission medium, the computer program including the steps of:

transmitting the control signal to the electric apparatus;  
receiving additional information that has been extracted from the received information and transmitted by the electric apparatus; and  
outputting the additional information received in the receiving step to a display device;

storing at least a portion of said additional information; and  
selectively deleting said information stored in said memory;

and

performing a control by using the computer program;

wherein said computer program further includes the steps of  
extracting said additional information and transmitting the additional information extracted at said extracting step for reception at said receiving step.

49. (New) An electric apparatus which receives information that is transmitted via a transmission medium and performs an operation in accordance with a control signal that is transmitted from a control device, comprising:

a first receiving unit for receiving the control signal transmitted from the control device;

a controller for performing a control in accordance with the control signal received by the first receiving unit;

006221 ETT5250  
CONT.

a second receiving unit for receiving the information transmitted via the transmission medium;

an extracting unit for extracting additional information from the information received by the second receiving unit; and

a transmitting unit for transmitting the additional information extracted by the extracting unit to the control device;

wherein the control device is configured to store said extracted additional information and selectively delete said extracted information.

50. (New) The apparatus of claim 49 wherein the electric apparatus is a personal computer.

51. (New) The apparatus of claim 49 wherein the electric apparatus is a television receiver.

52. (New) The apparatus of claim 49 wherein the electric apparatus is a recording apparatus.

53. (New) A control method of an electric apparatus which receives information that is transmitted via a transmission medium and performs an operation in accordance with a control signal that is transmitted from a control device, comprising the steps of:

a first receiving step of receiving the control signal transmitted from the control device;

performing a control in accordance with the control signal received in the first receiving step;

a second receiving step of receiving the information transmitted via the transmission medium;

extracting additional information from the information received in the second receiving step; and

transmitting the additional information extracted in the extracting step to the control device;

wherein the control device is configured to store said extracted additional information and selectively delete said extracted information.

54. (New) A transmission medium for transmitting a computer program used in an electric apparatus which receives information that is transmitted via a transmission medium and performs an operation in accordance with a control signal that is transmitted from a control device, the computer program comprising the steps of:

a first receiving step of receiving the control signal transmitted from the control device;

performing a control in accordance with the control signal received in the first receiving step;

a second receiving step of receiving the information transmitted via the transmission medium;

extracting additional information from the information received in the second receiving step; and

transmitting the additional information extracted in the extracting step to the control device;

wherein the control device is configured to store said extracted additional information and selectively delete said extracted information.

55. (New) A control method of an electric apparatus, comprising the steps of:

68. (New) The device of claim 56 wherein the output means outputs that part of the additional information which relates to a channel of current reception of the electric apparatus.

69. (New) The device of claim 56 wherein the output means outputs that part of the additional information which relates to information that will be received by the electric apparatus from a present time onward.

70. (New) A control device which controls, by transmitting a control signal, an electric apparatus that receives information transmitted via a transmission medium, comprising:

transmitting means for transmitting the control signal to the electric apparatus;

receiving means for receiving additional information that has been extracted from the received information and transmitted by the electric apparatus;

output means for outputting the additional information received by the receiving means to a display device;

selecting means for selecting information from the additional information received by the receiving means;

detachable storing means for storing the information selected by the selecting means; and

erasing means for erasing the information stored in the detachable storing means;

wherein said electric apparatus includes extraction means and an electric apparatus transmitting means, said electric apparatus transmitting means for transmitting the additional information extracted by said extraction unit to said receiving means.
